Resume Objective

Curious, ready-to-learn computer science specialist with strong leadership skills and respectable programming knowledge. I want to leverage said skills in order to land an exciting job pushing boundaries in the realm of computers. Ready to use my skills to increase the efficiency of the workplace and learn a lot while I'm doing it.

Language Experience

Ready to write Java, Python, CSS, HTML, JavaScript, and bash code on day one. Particularly comfortable with Python and Java.

In fact, this resume was created using only HTML / CSS through the vim text editor.

Always ready and happy to learn new languages if I need to.

Environment Experience

- Extremely comfortable with Unix and Windows Desktop Environments, well-versed in bash terminal usage.
- Heavy experience with Eclipse and terminal-based text editors like Vim and Nano for Java.
- Heavy experience with Enthought Canopy, Visual Studio Community 2017, Visual Studio Code (Open-Source), and terminal-based text editors like Vim and Nano for Python.
- Intermediate experience with Visual Studio Code, light experience with Adobe Dreamweaver for web development.

Education

Current undergrad at Indiana University Bloomington for a B.S. in Computer Science. After my undergraduate studies are completed, I plan on obtaining my Master's degree.

Prior Employment Experience

I've worked three "real" jobs in the food service industry, (Pizza Hut, Dairy Queen, and a small local ice cream hut known as the Inside Scoop), so I have experience working together with people in stressful environments and following strict sets of instructions and guidelines.
